This Version: April 24th, 2025

Georgia Institute of Technology

EDUCATION

Georgia Institute of Technology, GA, USA

Aug 2021 - May 2025

Bachelor of Science in Business Administration

Concentration in Finance

Minors in FinTech and Computer Science

RESEARCH INTEREST

Primary: Structured Finance, Banking Crisis, and Business Law/Ethics

Secondary: Financial Technology Evolvement

INDUSTRY EXPERIENCE

CIBC: Commodities/GCF Trading Summer Analyst

May 2024 - Aug 2024

- Conducted weekly fundamental analyses using Excel and Python on pipeline and storage facility data to project future price trends for the oil and natural gas trading desks that are used for daily trading decisions by the lead traders
- Facilitated insightful new deal and refinance decision processes for Global Collateral Financing clients by creating an internal client database that has logged 80+ client interactions in 4 weeks
- Improved the accuracy of our name identification system on the Commodities Desk, eliminating failure rates by programming an internal client name mapping update system via Python and VBA

Morgan Stanley: Private Wealth Management Intern

Aug 2023 - Apr 2024

- Streamlined information collection process by producing comprehensive earnings reports on 50+ portfolio holdings, integrating detailed data analysis using Excel, and creating in-depth financial models for the team
- Helped optimize the team's investment strategies by creating daily research reports on portfolio holdings and producing weekly analytical models on portfolio performance to track key performance indicators
- Engaged and served the portfolios of 100+ clients through the distribution of critical client materials and the management of communication platforms including email and internal client portals

Invesco: Global Capital Markets Syndicate Intern

Jun 2023 - Aug 2023

- Conducted analyses on 40+ equity and fixed income IPOs and secondary offerings for 2023 to track break performance over different holding periods and presented findings to upper management using Microsoft Power BI
- Created two trade completion forms for the syndicate team using Python and SQL that were approved and implemented by management to allow for easy entry of trade information and immediate access to organized and accurate data

STUDENT ACTIVITIES

Georgia Tech Investments Committee - Sector Head

January 2022 - Present

- Facilitate the management and growth of 250K out of 2M of Georgia Tech's endowment fund to invest in Media and Telecom sector equities and raise money for the GT Student Foundation
- Create investment theses by performing extensive industry research, technical analysis, and curating financial models such as relative valuations and Discounted Cash Flows (DCF) to identify undervalued securities in the market
- Completed a rigorous and competitive mentorship program which included presenting a detailed financial analysis and multiple valuations for Beyond Meat to a 70+ member committee

Scheller Business Ambassadors - President

January 2022 – Present

- Network with over 10 Scheller alumni and professors to coordinate two speaker panels for 50+ SBA members to promote professional development and provide students with key resources
- Work closely with the Undergraduate Program Office to organize scholarship events meant to highlight the business program and recruit high-caliber individuals

PROJECTS

Client Name Mapping System

January 2022 – Present

- During my time on the Commodities Desk, I identified a recurring issue with the internal name identification system that was leading to mismatches and errors when recognizing client names across various trading and reporting platforms. These inconsistencies caused delays in trade reconciliation and posed risks for downstream processes. To address this, I designed and implemented an internal client name mapping update system using Python and VBA, which automatically standardized and cross-referenced client identifiers from multiple data sources. The solution integrated smoothly with existing workflows, eliminated failure rates related to name mismatches, and significantly enhanced the reliability and speed of our reporting tools. As a result, the team experienced improved data integrity, reduced manual correction efforts, and greater confidence in the accuracy of client-related information used in both internal analysis and client-facing deliverables.

SKILLS

Programming: Java, Python, R, VBA, JavaScript, Power BI, SQL, Tableau

Language: English (native), Spanish (basic)
